Alaa Mohamed Abd-elhamed Hella

AI Quality Analyst

Cairo, Egypt | +20 120 884 3477 | alaamoabdo619@gmail.com | GitHub: Alaamohamed619 | English: C1 Advanced (Business Fluent) | Arabic: Native

PROFESSIONAL SUMMARY

Detail-oriented and meticulous AI Quality Analyst and AI Safety Evaluator with hands-on research and annotation experience, evaluating LLM personalization quality across Grounding, Integration, and Helpfulness dimensions. Ability to read and write in English with a high degree of proficiency (C1 Advanced), combining creativity and analytical rigor to design multi-turn conversational prompts from personal context. Skilled in Side-by-Side (SxS) model comparisons, stack-ranking, factual grounding audits, hallucination detection, and writing clear, defensible, C1-level rationales that reference specific turn numbers. Experienced in adversarial red-teaming, jailbreak resilience testing, journalistic-style fact verification, and error taxonomy classification, with strong attention to detail for subtle issues such as forced connections, poor inferences, and robotic overnarrating. Self-motivated, highly organized, and able to work independently in fast-paced, remote, 24-hour operations environments, consistently providing constructive feedback and detailed annotations.

CORE COMPETENCIES & SKILLS

- **AI Personalization Evaluation:** Grounding Audits, Integration Quality, Helpfulness Assessment, Forced-Connection Detection, Poor-Inference Identification, Overnarrating Detection, Debug Info Verification, Data Hygiene, Annotation.
- **Model Quality & SxS Ranking:** Side-by-Side (SxS) Comparison, Stack-Ranking, Hallucination Detection, Multi-Turn Context Retention, Refusal Alignment, Error Taxonomy Classification, Win-Rate & Preference-Score Analysis, Research & Annotation.
- **Safety & Red-Teaming:** Jailbreak Resilience Testing, Prompt Injection Analysis, Adversarial Attack Vectors, Safety Policy Compliance, Over-Refusal (False Positive) Auditing, Research-Based Vulnerability Analysis.
- **Creative Prompt Engineering:** Strong Creativity and a Creative Approach to Multi-Turn Prompt Design (1-5 turns) from Personal Context, Constraint Enforcement, Context Injection, Personalization Testing, Edge-Case Scenario Framing.
- **Written Communication & Soft Skills:** Meticulous Attention to Detail, Ability to Read and Write English Fluently, Structured and Defensible Rationales with Turn-Level Citations, Constructive Feedback and Detailed Annotations, Motivated and Able to Work Independently.
- **Research & Linguistics:** Applied Research Methods, Linguistics-Informed Tone and Phrasing Analysis, Journalism-Style Source Verification and Fact-Checking.
- **Technical Tools & Languages:** Python, Git, GitHub, JSON/CSV Benchmarking, Linux System Administration, Google Workspace (Gmail, Search, YouTube) Familiarity, English (C1 Advanced), Arabic (Native).

PROFESSIONAL EXPERIENCE

AI Safety & Red-Teaming Evaluator (Independent Research Project) — LLM Safety Benchmark | Aug 2026 – Present

Repository Owner & Lead Evaluator

- Built an evaluation and research framework to stress-test LLM safety alignment, prompt injection resilience, and refusal behavior across multi-turn adversarial interactions, applying creativity to anticipate novel attack patterns.
- Designed and annotated 4+ safety attack vectors (DAN roleplay, base64 encoding, context contamination) and categorized errors across harmful content generation, over-refusal, and context leakage.
- Developed a custom Python analytics script (eval_safety_metrics.py) to parse JSON datasets and CSV evaluation matrices, calculating Compliance Rates, Vulnerability Rates, and Over-Refusal Rates across 200+ adversarial prompts.
- Achieved a documented 95% traceability rate between flagged errors and their supporting evidence through meticulous, research-backed annotation practices.

AI Quality & Personalization Evaluator (Independent Research Project) — SxS Evaluation Benchmark | Jul 2026 – Present

Repository Owner & Lead Evaluator

- Engineered a creative, multi-turn evaluation benchmark assessing personalization quality across 3 core dimensions — Grounding (claims supported by evidence, not hallucination), Integration (natural, non-robotic use of personal data), and overall Helpfulness of model responses.
- Rigorously researched, annotated, and stack-ranked Side-by-Side (SxS) model responses, writing clear, defensible, C1-level rationales that explicitly reference turn numbers and identify forced connections, poor inferences, and overnarrating.
- Defined a granular error taxonomy (Forced Connections, Fact Hallucinations, Context Loss, Tone Misalignment) and programmed benchmark_summary.py to automate win-rate computation, preference-score tracking, and top error-category distribution across 100+ SxS evaluation runs.
- Improved annotation consistency across the research dataset by standardizing the error-taxonomy rubric, reducing rationale rework by an estimated 30%.

EDUCATION

Bachelor of Science in Computer and Information Technology
Faculty of Computers and Information, Tanta University — Egypt (Graduation: June 2025)

- **Major:** Information Technology (IT) | **GPA:** 3.45 / 4.0 (Very Good with Honors)
- **Graduation Project:** Crowdfunding Platform in Egypt (Grade: Excellent) — analytical, research-driven capstone requiring structured evaluation and documentation, directly relevant to analytical evaluation roles.

CERTIFICATIONS

- **Overview of AI** — Huawei ICT Academy (July 2026)
- **AI for You** — Oracle Learning (June 2026)

AVAILABILITY & WORK SETUP

Available for full-time, remote contractor engagement (up to 40 hrs/week) with flexible daily scheduling, including overlap with PST hours. Reliable desktop/laptop setup with strong, stable internet connection; comfortable using personal Google account and data sources for genuine, authentic personalization assessment.
